

PURUS PLATE 2014

For flexible and smooth installation.

VINYL FLOORING

TILE FLOORING

Purus Plate 2014 is unique. The benefit of it is that the mounting plate is reversible. For vinyl flooring the smooth flat side, without distance ring, is used. For tile flooring the ribbed side, with distance ring, is used. So, ONE installation plate with TWO fields of application. It doesn't get any better than that!

PURUS PLATE 2014

In wooden joist the floor gully is mounted so that movements can not occur between floor gully, plate, waterproofing membrane and floor. In order for floor gully to be considered properly installed it must be mounted and fixed in the joists with the fastening devices specified by the manufacturer, this means that you should only use the Purus Plate for installation in wooden joist.

Purus Plate 2014 is produced in white ABS-plastic, is glueable, has a loading class on 300 kg and is adapted for following Purus gullies: Oden, Brage, Ymer 50, Duschbrunn and Flex.

Vinyl flooring

Tile flooring

ADVANTAGES

- Square shape, instead of round, makes it's easier when you are cutting the wooden joist.
- Flexible. Smooth on one side and ribbed on the other depending on if it's installation for vinyl- or tile flooring.
- There is an integrated slope in the Purus Plate, so you don't have to build a slope around the gully.
- It's white color is pigmentfree which means that it will not discolor while installation vinyl floor.
