PURUS

Air admittance valve 50/40 is used for secondary air admittance, for example in drainage pipes. The air admittance valve 50/40 is installed with the intention of increasing the capacity and/or reducing the dimension. The air admittance valve has an air flow capacity of 11.3l/s at a negative pressure of 250Pa. The air admittance valve is CE marked and meets the requirements of SS-EN12380 A1.
