RSK 8573427

The PUM vertical waste outlet, with a height of 60mm, is a combination of a vertical waste and a water trap for wash basins with G32 connections. The odour barrier (membrane) is integrated in the vertical waste and is positioned under the lid, which can easily be lifted up for in situ cleaning and maintenance. The vertical waste replaces the usual cup-style water trap, saving space underneath the wash basin. It can be combined with floor and wall outlet kits which do not have a conventional water trap. This PUM vertical waste outlet does not have a connection for overflow drains.
